IMPORTANT SAFETY INSTRUCTIONS
READ AND SAVE THESE INSTRUCTIONS

WARNING

When properly cared for, your new appliance has been designed to be safe and reliable. Read all instructions carefully before use. These precautions will reduce the risk of burns, electric shock, fire, and injury to persons. When using kitchen appliances, basic safety precautions must be followed, including those in the following pages.

Proper Installation and Maintenance

Have the installer show you the location of the circuit breaker or fuse. Mark it for easy reference.

This appliance must be properly installed and grounded by a qualified technician. Connect only to properly grounded outlet. Refer to Installation Instructions for details.

This appliance is intended for normal family household use only. It is not approved for outdoor use. See the Statement of Limited Product Warranty. If you have any questions, contact the manufacturer.

Do not store or use corrosive chemicals, vapors, flammables or nonfood products in or near this appliance. It is specifically designed for use when heating or cooking food. The use of corrosive chemicals in heating or cleaning will damage the appliance and could result in injury.

Do not operate this appliance if it is not working properly, or if it has been damaged. Contact an authorized servicer.

Do not obstruct oven vents.

Do not repair or replace any part of the appliance unless specifically recommended in this manual. Refer all servicing to an authorized servicer.

WARNING

Risk of burns!
To avoid risk of injury, turn off the interior light before cleaning the oven to allow the bulbs to cool down. The bulbs can become very hot when switched on. Keep the light off while cleaning the oven.

WARNING

Make sure the appliance and lights are cool and power to the appliance has been turned off before replacing the light bulb(s). Failure to do so could result in electrical shock or burns. The lenses (if equipped) must be in place when using the appliance. The lenses (if equipped) serve to protect the light bulb from breaking. The lenses (if equipped) are made of glass. Handle carefully to avoid breaking. Broken glass can cause an injury.
IMPORTANT SAFETY INSTRUCTIONS
READ AND SAVE THESE INSTRUCTIONS

**WARNING**
Light socket is live when door is open if main power supply is not turned off.

**Fire Safety**

**WARNING**
NEVER cover any slots, holes or passages in the oven bottom or cover an entire rack with materials such as aluminum foil. Doing so blocks air flow through the oven. Aluminum foil linings may also trap heat, causing a fire hazard.

If materials inside an oven or warming drawer should ignite, keep door closed. Turn off the appliance and disconnect the circuit at the circuit breaker box.

**WARNING**
Use this appliance only for its intended use as described in this manual. NEVER use this appliance as a space heater to heat or warm the room. Doing so may result in overheating the appliance. Never use the appliance for storage.

Always have a working smoke detector near the kitchen.

In the event that personal clothing or hair catches fire, drop and roll immediately to extinguish flames.

Have an appropriate fire extinguisher available, nearby, highly visible and easily accessible near the appliance.

Smother flames from food fires other than grease fires with baking soda. Never use water on cooking fires.

**WARNING**
TO REDUCE THE RISK OF INJURY TO PERSONS IN THE EVENT OF A GREASE FIRE, OBSERVE THE FOLLOWING:

1. SMOTHER FLAMES with a close-fitting lid, cookie sheet, or metal tray, then turn off the burner. BE CAREFUL TO PREVENT BURNS. If the flames do not go out immediately, EVACUATE AND CALL THE FIRE DEPARTMENT.

2. NEVER PICK UP A FLAMING PAN – You may be burned.

3. DO NOT USE WATER, including wet dishcloths or towels – a violent steam explosion will result.

4. Use an extinguisher ONLY if:
   - You know you have a Class ABC extinguisher, and you already know how to operate it.
   - The fire is small and contained in the area where it started.
   - The fire department is being called.
   - You can fight the fire with your back to an exit.
Burn Prevention

DO NOT TOUCH HEATING ELEMENTS OR INTERIOR SURFACES OF OVEN - Heating elements may be hot even though they are dark in color. Interior surfaces of an oven become hot enough to cause burns. During and after use, do not touch, or let clothing, potholders, or other flammable materials contact heating elements or interior surfaces of oven until they have had sufficient time to cool. Other surfaces of the appliance may become hot enough to cause burns. Among these surfaces are oven vent openings, surfaces near these openings and oven doors.

Exercise caution when opening the appliance. Standing to the side, open the door (or drawer) slowly and slightly to let hot air and/or steam escape. Keep your face clear of the opening and make sure there are no children or pets near the unit. After the release of hot air and/or steam, proceed with your cooking. Keep doors shut unless necessary for cooking or cleaning purposes. Do not leave open doors unattended.

WARNING
Risk of burns!
The inside of the appliance door becomes very hot during operation. Always open the appliance door as far as it will go. Ensure that the appliance door does not swing back. Avoid contact with the inside of the appliance door.

Do not heat or warm unopened food containers. Build-up of pressure may cause the container to burst and cause injury.

Use caution when cooking foods with high alcohol content (e.g. rum, brandy, bourbon) in the oven. Alcohol evaporates at high temperatures. There is a risk of burning as the alcohol vapors may catch fire in the oven. Use only small quantities of alcohol in foods, and open the oven door carefully.

Always place oven racks in desired location while oven is cool. Always use oven mitts, when the oven is warm. If a rack must be moved while oven is hot, do not let potholder contact the heating elements.

CAUTION
To avoid possible injury or damage to the appliance, ensure rack is installed exactly per installation instructions and not backwards or upside down.

Always use dry potholders. Moist or damp potholders on hot surfaces may result in burns from steam. Do not let potholder touch hot heating elements. Do not use a towel or other bulky cloth.

Secure all loose garments, etc. before beginning. Tie long hair so that it does not hang loose, and do not wear loose fitting clothing or hanging garments, such as ties, scarves, jewelry, or dangling sleeves.
Child Safety
When children become old enough to use the appliance, it is the responsibility of the parents or legal guardians to ensure that they are instructed in safe practices by qualified persons.

Do not allow anyone to climb, stand, lean, sit, or hang on any part of an appliance, especially a door, warming drawer, or storage drawer. This can damage the appliance, and the unit may tip over, potentially causing severe injury.

Do not allow children to use this appliance unless closely supervised by an adult. Children and pets should not be left alone or unattended in the area where the appliance is in use. They should never be allowed to play in its vicinity, whether or not the appliance is in use.

CAUTION
Items of interest to children should not be stored in an appliance, in cabinets above an appliance or on the backsplash. Children climbing on an appliance to reach items could be seriously injured.

Cleaning Safety
IMPORTANT SAFETY NOTICE: The California Safe Drinking Water and Toxic Enforcement Act requires the Governor of California to publish a list of substances known to the state to cause cancer, birth defects or other reproductive harm, and requires businesses to warn customers of potential exposure to such substances.

The burning of gas cooking fuel and the elimination of soil during self-cleaning can generate some by-products which are on the list. To minimize exposure to these substances, always operate this unit according to the instructions contained in this booklet and provide good ventilation.

When self-cleaning, confirm that the door locks and will not open. If the door does not lock, do not run Self-Clean. Contact service.

Wipe out excessive spillage before self-cleaning the oven.

Birds have very sensitive respiratory systems. Keep pet birds out of the kitchen or other rooms where kitchen fumes could reach them. During self-clean, fumes are released that may be harmful to birds. Other kitchen fumes such as overheating margarines and cooking oils may also be harmful.

Keep oven free from grease build up.

Cookware Safety
NOTICE
Do not place food directly on oven bottom.

Follow the manufacturer’s directions when using cooking or roasting bags.

CAUTION
Do not leave food or cooking utensils, etc., in the oven during the self-cleaning mode of operation.
IMPORTANT SAFETY INSTRUCTIONS
READ AND SAVE THESE INSTRUCTIONS

Do not clean parts or accessories in the self-clean oven.

WARNING
Risk of electric shock!
Use of a wrong core temperature probe can damage the insulation.
Use only the core temperature probe intended for this appliance.

Proposition 65 Warning:
This product may contain a chemical known to the State of California, which can cause cancer or reproductive harm. Therefore, the packaging of your product may bear the following label as required by California:

STATE OF CALIFORNIA PROPOSITION 65 WARNING:
WARNING
Cancer and Reproductive Harm - www.P65Warnings.ca.gov
Causes of damage

NOTICES:

- Accessories, foil, baking paper or cookware on the bottom of the oven interior: do not place any accessories on the bottom of the oven interior. Do not line the bottom of the oven interior with any type of foil or baking paper. Do not place cookware on the bottom of the oven interior when a temperature above 122°F (50 °C) is set. This produces a build-up of heat. Baking and roasting times are no longer correct and the enamel is damaged.

- Water in the hot oven interior: Never pour water into the hot oven interior. Steam is produced. Damage to the enamel can arise due to the temperature change.

- Do not leave moist groceries in a closed oven for an extended period of time. It can lead to corrosion inside the oven.

- Fruit juice can leave stains in the oven. Always remove fruit juice immediately when safe to touch, and wipe up first with a damp and then a dry cloth.

- Cooling with the appliance door open: only allow the oven cavity to cool when it is closed. Even if the appliance door is only open a little, front panels of adjacent units could be damaged over time.

- Highly soiled door seal: the appliance door will no longer close properly during operation if the door seal is highly soiled. Adjoining furniture fronts may be damaged. Always keep the door seal clean.

- Appliance door as a seat or storage surface: do not stand, sit or hang on the appliance door. Do not place any cookware or accessories on the appliance door.

- Inserting accessories: depending on the appliance type, accessories can scratch the door pane when closing the appliance door. Always slide accessories fully into the oven interior.

- Do not hold or carry the appliance by the door handle. The door handle cannot carry the weight of the device and could break off.

Environmental protection

Unpack the appliance and dispose of the packaging in an environmentally friendly manner.

Tips for saving energy

- Open the appliance door as little as possible while cooking, baking or roasting.

- Use dark, black-painted or enameled baking forms. These absorb the heat particularly well.

- It is best to bake several cakes in succession. The oven is still warm. This shortens the baking time for the second cake. You can also slide in two loaf tins next to each other.

- In the hot air mode, you can bake simultaneously on several levels.

- For longer cooking times, you can switch off the oven 10 minutes before the end of the cooking time and you can use the residual heat to finish cooking.
Familiarizing yourself with your appliance

You will get to know your new appliance here. We explain the control panel and the individual controls to you. You are informed about the oven interior and accessories.

**Oven**

1. Door seal
2. Rotisserie spit drive
3. Grill heating element
4. Socket for core temperature probe
5. Socket for additional heating element (special accessory for baking stone and roaster)
6. Oven vents
7. Recessed handle

**NOTICE**

Do not place food directly on oven bottom.

Do not obstruct oven vents.
Displays and controls

These instructions apply to different versions of the appliance. Slight deviations are possible depending on the appliance type.

Operation is identical for all appliance versions.

Presentation

The presentation of symbols, values or the entire display changes depending on the situation.

Zoom

The display of the setting you are just changing is enlarged.

Just before it elapses, a duration that is just elapsing is enlarged (e.g. the last 60 seconds in the case of timers).

Minimized display screen

After a short time, the display screen is minimized and only the most important things are displayed. This function is the default and can be modified in the basic settings.
Familiarizing yourself with your appliance

Standby

The appliance switches to standby mode if no function is set or the childproof lock is activated.

The brightness of the control panel is dimmed in standby mode.

Notes

- Different things can be displayed in standby mode. The default setting is the GAGGENAU logo and the time.
- The brightness of the display depends on the vertical viewing angle.
- You can change the display and the brightness at any time in the basic settings. → "Basic settings" on page 36

Activate appliance

In order to exit standby mode, you can either

- Set the function selector,
- Touch a control panel,
- or open or close the door.

Now you can set the desired function. Read the appropriate chapters to learn how to set functions.

Notes

- If "Standby screen = off" is selected in the factory setting, you must turn the function selector to exit the standby mode.
- The standby display appears again if you have not made any settings for a long while after activation.
- The cooking compartment lighting goes out after a little while if the door is open.

Automatic door opening

When you touch the † symbol, the appliance door springs open and you can open it fully with the handle recess at the side.

Automatic door opening does not work when the child lock is activated or in the event of a power failure. You can open the door manually with the handle recess at the side.

Additional information 1 and 1️⃣

By touching the 1 symbol, you can call up additional information. For example, information on the type of heating set or on the current temperature of the cooking compartment.

Note: During continuous operation after heating up, slight deviations in temperature are normal.

The 1️⃣ symbol appears for important information and indicates that an action is required. Important information on safety and operating status is also occasionally displayed automatically. These messages disappear automatically after a few seconds, or must be confirmed with ✔.

With Home Connect messages, the Home Connect status additionally appears in the 1️⃣. You will find more information about this in the section entitled → "Home Connect" on page 32.

Cooling fan

Your appliance has a cooling fan. The cooling fan switches on during operation. Depending on the appliance version, the warm air escapes above or under the door.

After removing cooked food, keep the door closed until the appliance cools down. The appliance door must not be left ajar, as adjoining kitchen furniture may be damaged. The cooling fan continues to run for a while and then switches off automatically.

⚠️ CAUTION

Do not cover up the ventilation slots. Otherwise, the appliance will become overheated.

### Accessories

Use only the accessories included or obtainable from after-sales service. It has been specially adapted to your appliance. Make sure you always insert accessories into the interior the right way round.

Your appliance comes with the following accessories:

- Baking tray, enameled
- Wire grill tray
- Grill tray with wire rack
- Rotisserie spit

Before using the appliance for the first time

In this chapter, you can find out what you must do before using your oven to prepare food for the first time. First read the section entitled → "IMPORTANT SAFETY INSTRUCTIONS" on page 4.

The appliance must be completely installed and connected.

After connecting the appliance to the power supply, the "Initial settings" menu will be displayed. Now you can now configure your new appliance for initial set-up.

Notes

- The "Initial settings" menu will appear only after the appliance has been connected to a power supply and switched on for the first time, or if the appliance has not been connected to a power supply for a number of days.

  Once the appliance has been connected to a power supply, the GAGGENAU logo will appear first for approximately 30 seconds. The "Initial settings" menu will then appear automatically.

- You can change the settings at any time in the basic settings. → "Basic settings" on page 36

Setting the language

The default language appears in the display.

1. Select the desired display language with the rotary selector.
2. Confirm with ✓.

Setting the time format

the two possible formats 24h and AM/PM appear in the display. The default format is 24h.

1. Set the required format with the rotary selector.
2. Confirm with ✓.

Setting the time

The time appears in the display.

1. Set the required time with the rotary selector.
2. Confirm with ✓.
Operating the appliance

Setting the date format
The three possible formats D.M.Y, D/M/Y and M/D/Y appear in the display. The D.M.Y is the default.
1. Set the required format with the rotary selector.
2. Confirm with ✓.

Setting the date
The default date appears in the display. The day setting is already active.
1. Set the required day with the rotary selector.
2. Switch to the month setting with the ➔ symbol.
3. Set the month with the rotary selector.
4. Switch to the year setting with the ➔ symbol.
5. Set the year with the rotary selector.
6. Confirm with ✓.

Setting the temperature unit
The two possible units °C and °F will appear on the display. The default unit is °C.
1. Use the rotary selector to select the unit you require.
2. Press ✓ to confirm.

Completing initial set-up
"Initial set-up complete" will appear on the display.
Press ✓ to confirm.
The appliance will switch to standby mode and the standby display will appear. The appliance is now ready to use.

Heating up the oven
Make sure that there is no leftover packaging in the cooking compartment.
To eliminate the new-appliance smell, heat up the oven with it empty and the door closed. One hour with hot air ➔ at 200 °C is ideal for this.

Cleaning accessories
Before using accessories for the first time, thoroughly clean them with hot soapy water and a soft dish cloth.

Operating the appliance

Oven interior
The cooking compartment has five shelf levels.

CAUTION
Do not place anything on the cooking compartment floor. Do not cover it with aluminium foil. A build-up of heat could damage the appliance or cause injury.

CAUTION
Do not slide any accessories between the shelf positions, or they may tip.

WARNING
Risk of burns!
The inside of the appliance door becomes very hot during operation. Always open the appliance door as far as it will go. Ensure that the appliance door does not swing back. Avoid contact with the inside of the appliance door.

Inserting the rack
The accessories feature a rack stop function. The rack stop function prevents tilting of accessories when pulling them out. You must insert accessories in the oven interior correctly so that tilt protection will work.

Inserting the rack
1. Tilt the rack to guide the rack stop in between the rails of the rack holders A. The rack stop has to face downwards.
Operating the appliance

2. Lower the rack and slide it into the oven, so that the rack stop can engage. Make sure the rack’s safety rod is at the rear and top.

Quick heat

With the "Quick heat" function, your appliance reaches the desired temperature particularly quickly in the top heat, bottom heat, and top/bottom heat types of heating.

To ensure an even cooking result, do not place your food in the cooking compartment until "Quick heat" is complete and the heat-up symbol goes out.

Note: The "Quick heat" function is preset in the factory settings. In the basic settings, you can select Quick heat or Heat-up. "Basic settings" on page 36

Safety shut-off

For your protection, the appliance has a safety shut-off feature. Every heating operation is switched off after 12 hours if the appliance is not operated during this time. A message appears in the display.

Exception: programming with the long-term timer.

Turn the program selection to 0, after which you can operate the appliance in the manner to which you are accustomed.

Turning on

1. Set the required heating mode using the function selector. The chosen heating mode and the default temperature are displayed.

2. If you want to change the default temperature:
   set the required temperature with the rotary selector.

The preheating symbol appears on the display. The bar continuously shows the preheating status. When the set temperature is reached, a signal sounds and the preheating symbol goes off.

Note: The oven interior lighting stays switched off at a temperature setting below 160° F (70° C).

Switching off:
Turn the function selector to 0.
Timer functions

In the timer menu, set:
- Timer
- Stopwatch
- Cooking time (not in the idle state)
- Cooking time end (not in the idle state)

Launching the timer menu

You can launch the timer menu from any mode. Only from the factory settings, program selection is set to S, the time menu is not available.

Touch the symbol.

The timer menu appears.

Timer

The timer runs independently of the other appliance functions. You can enter a maximum of 90 minutes.

Setting the timer

1. Call up the Timer menu.
   The "Timer" function is displayed.
2. Turn the rotary selector to set the desired time.
3. Start with .

The Timer menu closes and the timer starts to run. The symbol for the timer appears on the display and the time can be seen counting down.

Stopwatch

The stopwatch runs independently of the other appliance functions.

The stopwatch counts up from 0 seconds to 90 minutes.

It has a pause function. Therefore, you can stop the timer in between times.

Starting the stopwatch

1. Launch the timer menu.
2. With , select the "Stopwatch" function .
3. Start with .

A signal sounds once the time has elapsed. The audible signal ceases if you touch the symbol.

You can exit the Timer menu at any time by touching the symbol. This way, the settings are lost.

Suspend timer:

Call up the Timer menu. Select the "Timer" function with , select , and touch the symbol. To let the timer run on, touch the symbol.

Switch off the timer early:

Call up the Timer menu. Select the "Timer" function with , select , and touch the symbol.
The timer menu is closed and the time runs. The symbol and the elapsing timer are shown in the display.

Stopping and restarting the stopwatch
1. Launch the timer menu.
2. With 
   select the "Stopwatch" function .
3. Touch the symbol.

   The time stops. The symbol changes to Start again.
4. Start with .

   The time continues to run. Once 90 minutes have been reached, the display pulsates and a signal sounds. It goes off when you touch the symbol. The symbol disappears from the display. The operation has ended.

Switching off the stopwatch:
Launch the timer menu. With 
, select the "Stopwatch" function and touch the symbol.

Cooking time
If you set a cooking time for your meal, the appliance switches off heating automatically after this time has elapsed.

You can set a cooking time from 1 minute to 23:59 hours.

Setting the cooking time
You have set the heating function and temperature and you have placed your dish in the oven interior.
1. Touch the symbol.
2. With 
   select the "Cooking time" function .

3. Set the required cooking time with the rotary selector.

4. Start with .

   The appliance starts. The timer menu is closed. The temperature, the operating mode, the remaining cooking time and the end of the cooking time appear in the display.

One minute before expiration of the cooking time, the expiring cooking time is enlarged in the display.

The appliance switches off after expiration of the cooking time. The pulsates and a signal sounds. It goes off prematurely if you touch the symbol, open the appliance door or set the program selection to 0.

Interrupting the cooking time:
Launch the timer menu. With 
, select the "Cooking time" function . With interrupt the cooking time. With continue the cooking time.

Changing the cooking time:
Launch the timer menu. With 
, select the "Cooking time" function . Set the cooking time with the rotary selector. Start with .

Clearing the cooking time:
Launch the timer menu. With 
, select the "Cooking time" function . Clear the cooking time with . Return to normal operation with .
Timer functions

**Canceling the entire operation:**
Set the program selection to 0.

**Note:** You can also change the heating function and temperature during the cooking time.

**End of cooking time**

You can defer the end of the cooking time until later.

Example: it is 2 pm. The meal takes 40 minutes to cook. It should be ready by 3.30 pm.

Enter the cooking time and shift the end of the cooking time to 3.30 pm. The electronic circuitry calculates the starting time. The appliance starts automatically at 2:50 pm and switches off at 3.30 pm.

Note that easily perishable foodstuffs must not be left in the oven for too long.

**Shifting the end of the cooking time**

You have set the heating function, the temperature and the cooking time.

1. Touch the symbol.
2. With , select the "End of cooking time" function.
3. Set the required cooking time end with the rotary selector.
4. Start with .

The appliance assumes a waiting mode. The operating mode, the temperature, the cooking time and the end of the cooking time appear in the display. The appliance starts at the calculated time and switches off automatically when the cooking time has elapsed.

**Note:** If the symbol flashes: you have not set a cooking time. Always set a cooking time first.

The appliance switches off after expiration of the cooking time. The symbol pulsates and a signal sounds. It goes off prematurely if you touch the symbol, open the appliance door or set the program selection to 0.

**Changing the cooking time end:**
Launch the timer menu. With , select "End of cooking time" . Set the required cooking time end with the rotary selector. Start with .

**Canceling the entire operation:**
Set the program selection to 0.
Sabbath mode and Yom Tov mode

Sabbath mode

With this function, the appliance maintains a temperature between 120 and 450°F (50 and 230°C) with the convection heating function.

You can keep dishes warm for up to 74 hours without having to switch on or off.

Note that easily perishable foodstuffs must not be left in the oven for too long.

**Note:** You must activate the Sabbath mode in the factory setting in order to operate the mode. → "Basic settings" on page 36

Follow these steps:

1. Set the program selector to S.
2. Select "Factory setting" with the rotary selector.
3. Confirm by touching the ✓ symbol.
4. Rotate the selector to Sabbath mode ☿.
5. Confirm by touching the ✓ symbol.
6. Rotate the selector to "activate".
7. Confirm by touching the ✓ symbol.
8. Turn the oven off.

Setting the Sabbath mode

1. Set the program selector to ☿.
2. Touch the ☐ symbol.
   - The suggested value of 24h at 185°F (85°C) appears in the display. Start with 1 or -
   - Change the cooking time and the temperature.

3. Changing the cooking time ☐:
   - Touch the ☐ symbol. Set the preferred cooking time with the rotary selector. You can set up to 74 hours. Confirm by touching the ✓ symbol. Then changing the temperature becomes an option.
4. Changing the temperature:
   - Set the required temperature with the rotary selector.

5. Start with 1.

The appliance starts. ☐ and the temperature appear in the display. The Sabbath screen will appear as shown.

The oven and display lighting is off. The control panel is blocked and no tone can be heard when you touch it.

The appliance no longer heats after expiry of the time. The display is blank. Set the program selector to 0.

Switching off:
To cancel the operation, set the program selector to 0.

Yom Tov mode

With this function, the appliance is programmed to perform in three stages.

Stage 1 and 2 can be programmed for a maximum total duration of 74 hours. The duration of Step 3 is 1 hour and cannot be modified.

**Stage 1:** maintains a warm temperature of 122°F (50°C) in the convection heating function. The interior oven lights remain off through this stage.

**Stage 2:** the appliance raises to a desired temperature setting and maintains a temperature between 120 and 450°F (50-230°C). For warming and cooking foods in the convection heating function. The desired time can be adjusted for this stage. The interior oven lights will be on during this time.

**Stage 3:** maintains a warm temperature of 122°F (50°C) in the convection heating function for 1 hour after stage 2 has ended. The interior oven lights will be on during this time.

Note that easily perishable foodstuffs must not be left in the oven for too long.
Sabbath mode and Yom Tov mode

Setting the Yom Tov mode

1. Set the program selector to Ž.
2. Touch the / symbol.

The suggested value of 24h at 185° F (85°C) appears in the display.

To set Stage 2 cooking time with rotary selector:

1. Touch the $ symbol to adjust the duration of Stage 2 cooking time .
2. Set the desired Stage 2 cooking time with the rotary selector.
3. Touch the C symbol to adjust the end of Stage 2 cooking time .
4. Select the end time with the rotary selector.
5. Change the date if needed by touching the C symbol to V.
6. Rotate the selector to the desired date.
7. Confirm settings by touching the ™ symbol.

To set Stage 2 temperature:

1. Rotate selector to desired Stage 2 temperature.
2. Start with ê.

The temperatures of Stage 1 and Stage 2 appear in the display. The remaining time to the beginning of Stage 2 is counted down in the display. The Yom Tov screen will appear as shown.

The program will begin with the pre-set warm temperature without light, then advance to the programmed temperature with light until the end of the set date and time, and then maintain the pre-set warm temperature for 60 minutes.

The appliance no longer heats after expiry of the time. The display is blank. Set the program selector to 0.

Switching off:

To cancel the operation, set the program selector to 0.
Automatic programs

You can prepare a wide range of food using the automatic programs. The appliance will choose the optimal setting for you.

To achieve good results, the cooking compartment must not be too hot for the type of food you have selected. If it is, a message will appear on the display. Allow the appliance to cool and then try again.

Information on the settings

- The cooking result depends on the quality of the food and the size and type of cookware. For an optimal cooking result, only use food that is in good condition and meat that is chilled to refrigerator temperature. For frozen food, use food straight out of the freezer only.
- The automatic program suggests a temperature, type of heating and cooking time.
- For some dishes, you will be required to enter the weight. It is not possible to set weights outside of the intended weight range.
- For some dishes, you will be asked to enter desired level of browning, the thickness of the food and/or the cooking level of the meat or vegetables.
- For some dishes, the cooking compartment is preheated empty. Place the food in the cooking compartment once the preheating is complete and a message appears in the display.
- Your preferred settings will be shown next time as a suggestion.

Core temperature probe

For some recipes, you will need the core temperature probe. Use the core temperature probe for these recipes. → "Core temperature probe" on page 26

Selecting a dish

The following categories are available. One or more dishes are listed beside each category.

Categories:

- Vegetables
- Oven dishes
- Fish
- Meat and poultry
- Bread, pizza and cake
- Drying
- Dough

Applying settings for dishes

You are guided through the entire setting process. Follow the instructions in the display.

Use the rotary selector to scroll through the individual levels.

1. Set the function selector to ☀.
2. Touch the symbol. Press ✔ to confirm.
3. Use the rotary selector to select the category and press ✔ to confirm.
4. Use the rotary selector to select the required dish and press ✔ to confirm.

The possible settings appear in the display. For many dishes, you can change the settings to suit your needs.

For some dishes, you must set the weight.

Tip: By pressing the symbol, you can receive information about accessories and preparation methods.

5. Press ✔ to confirm the required settings. Follow the directions on the display.

Once the cooking time has elapsed, an audible signal sounds. The appliance stops heating.

⚠️ WARNING

Risk of scalding!

Hot steam can escape when you open the appliance door. Open the appliance door with caution. Keep children away.

Opening the appliance door affects the cooking result. Open the appliance door only briefly. The automatic program is interrupted and continues to run after closing the appliance door.

Adding extra cooking time

After the cooking time has ended, you can leave some dishes to continue cooking if you are not satisfied with the cooking result.

A query appears on the display, which asks if you want to continue cooking.

1. Press ✔ to confirm.
2. Select a single or double cooking time, depending on requirements.
3. Press ✔ to start.
4. If the "Continue cooking" function has ended, turn the function selector to 0.
Changing and canceling

After starting the appliance, the settings can no longer be changed.

If you want to cancel the operation, turn the function selector to 0.

Calling up the last automatic programs used

The last five dishes with the selected settings are saved. You have the option of saving these dishes with the selected settings as individual recipes. You can no longer change the settings of an individual recipe if you have saved it using the "Last automatic programs" function → "Personal recipes" on page 24

1. Set the function selector to ž.  ■ is displayed.
2. Touch the ■ symbol.
3. Use the rotary selector to select "Last automatic programs" and press ✓ to confirm.
4. Use the rotary selector to select the required dish and press ✓ to confirm.
5. Enter a name for the dish and save. → "Entering a name" on page 25

Recording a recipe

It is possible to set up to 5 phases consecutively while recording at the same time.

1. Set the function selector to ž.
2. Touch the ■ symbol.
3. Use the rotary selector to select "Individual recipes" and press ✓ to confirm.
4. Use the rotary selector to select a free memory location.
5. Touch the © symbol.
6. Set the desired temperature with the rotary selector.
7. The cooking time is recorded.
8. Recording another phase:
   Set the program selection to the required heating function. Set the required temperature with the rotary selector. A new phase begins.
9. Once the appliance has achieved the desired cooking result, touch the ■ symbol to end the recipe.
10. Enter the name under "ABC". → "Entering a name" on page 25

Notes

- Recording a phase does not begin until the appliance has reached the set temperature.
- Every phase must last at least one minute.
- During the first minute you can change the heating function or the temperature.

Enter the core temperature for a phase:
Insert the core temperature probe in the socket in the oven interior. Set the heating function and temperature. Touch the © symbol. With the rotary selector, enter the required temperature and confirm it with ©.
Programming a recipe

You have the option of programming and saving up to five phases of preparation.

1. Set the function selector to ☑.
2. Touch the ✂ symbol.
3. Use the rotary selector to select "Individual recipes" and press ✓ to confirm.
4. Choose a free storage location with the rotary selector.
5. Touch the ✂ symbol.
6. Enter the name under "ABC". → "Entering a name" on page 25
7. Choose the first phase with the ☑ symbol.
   The heating function and temperature set at the start are displayed. You can change the heating function and temperature with the rotary selectors.
8. Choose the time setting with the ☑ symbol.
9. Set the required cooking time with the rotary selector.
10. Choose the next phase with the ☑ symbol.
     - or -
     Preparation is complete, end input.
11. Save with ✓.
     - or -
     Cancel with ✂ and quit the menu.

Enter the core temperature for a phase:
Choose the next phase with the ☑ symbol. Set the heating function and temperature. Touch the ✓ symbol. With the rotary selector, enter the required temperature and confirm it with ✓.

**Note:** For phases for which a core temperature has been programmed you cannot set a cook time.

Entering a name

1. Enter the recipe's name under "ABC".

```
<table>
<thead>
<tr>

<tr>
<td>✂</td>
<td>Clear letters</td>
</tr>
</tbody>
</table>
```

2. Save with ✓.
   - or -
   Cancel with ✂ and quit the menu.

**Note:** For entering a name, Latin characters, certain special characters and numbers are available.

Starting a recipe

1. Set the function selector to ☑.
2. Touch the ✂ symbol.
3. Use the rotary selector to select "Individual recipes" and press ✓ to confirm.
4. Use the rotary selector to select the desired recipe.
5. Press ☑ to start.
   The operation begins. The cooking time starts counting down.
   The settings for each phase are shown in the display.
Notes

- The cooking time does not start counting down until the appliance has reached the set temperature.
- You can use the rotary selector to change the temperature while the recipe is in progress. This does not change the saved recipe.

Change recipe

You can change the settings of a recorded or programmed recipe.

1. Set the function selector to ⏯.
2. Touch the symbol.
3. Use the rotary selector to select "Individual recipes" and press ✔ to confirm.
4. Use the rotary selector to select the desired recipe.
5. Touch the symbol.
6. Use the symbol to select the desired phase.
   - The programmed heating type, temperature, and cooking time are displayed. You can change the settings with the rotary selector or the function selector.
7. Save with ✔.
   - or -
   - Cancel with X and exit the menu.

Deleting a recipe

1. Set the function selector to any type of heating.
   - The symbol is displayed.
2. Touch the symbol.
3. Use the rotary selector to select the desired recipe.
4. Delete the recipe with C.
5. Confirm with ✔.

Core temperature probe

The core temperature probe makes it possible to cook with exact precision. It measures the temperature inside the food being cooked. When the required core temperature has been reached, the probe switches off automatically, ensuring that all food is cooked perfectly.

⚠️ WARNING

Risk of electric shock!
Use of a wrong core temperature probe can damage the insulation. Use only the core temperature probe intended for this appliance.

⚠️ WARNING

Risk of burns!
The oven interior and the core temperature probe become very hot. Use oven mitts to plug and unplug the core temperature probe.

⚠️ CAUTION

Damage to the core temperature probe:
Do not use the core temperature probe with the heating modes "Broil" or "Economy Broil". Before using the heating modes "Broil" or "Economy Broil", remove the core temperature probe from the oven cavity. It is possible to use the heating mode “Broil + Circulated Air” at temperatures up to 480° F (250 °C).

⚠️ CAUTION

Damage to the core temperature probe:
The core temperature probe may be damaged at temperatures above 480° F (250 °C). When using the core temperature probe, never set the temperature above 480° F (250 °C).

Only use the core temperature probe supplied. You can purchase it as a spare part from Customer Service or from the online shop.

When using the core temperature probe, never place the food on the top shelf position in the oven.
After use, always remove the core temperature probe from the oven cavity. Never store it inside the oven cavity.

After each use, clean the core temperature probe with a damp cloth. Do not clean in the dishwasher.

**Inserting the core temperature probe into the food**

Insert the core temperature probe into the food before you place the food in the oven cavity.

The core temperature probe has three measuring points. Insert the core temperature probe as far as possible. The core temperature probe must not be inserted in the fat or be touching the ovenware or bones.

**Meat**: Insert the core temperature probe at an angle from above as far as it will go into the meat. For more than one piece of meat, insert the core temperature probe into the middle of the thickest piece.

**Poultry**: Insert the core temperature probe as far as it will go into the thickest point in the breast. Depending on its structure, insert the core temperature probe into the poultry crossways or lengthways. With poultry, make sure that the tip of the core temperature probe does not protrude into the cavity in the middle of the bird.

**Fish**: Insert the core temperature probe behind the head as far as it will go towards the spine. Place the whole fish onto the wire rack and prop it up in the swimming position using half a potato.

Turning the food: If you want to turn the food, do not remove the core temperature probe. Once you have turned the food, check that the core temperature probe is correctly positioned in the food.

If you remove the core temperature probe during operation of the appliance, all settings are reset and you have to apply them again.

**Setting the core temperature**

**CAUTION**

**Damage to the core temperature probe:**

The core temperature probe may be damaged if the distance between the grill heating element and the core temperature probe is too small. Make sure that the distance between the grill heating element and the core temperature probe or the cable of the core temperature probe is a few centimeters. The meat may expand during the cooking process.

**CAUTION**

**Damage to the core temperature probe:**

Do not trap the cable of the core temperature probe in the appliance door.

1. Insert the food to cook in the oven cavity with a core temperature probe inserted. Insert the core temperature probe into the socket in the oven cavity and close the appliance door.
2. Turn the function selector to the desired heating type.
3. Use the rotary selector to set the oven cavity temperature.
4. Touch the \(\uparrow\) symbol. Use the rotary selector to change the set core temperature for the food and confirm with \(\uparrow\).

The core temperature set must be higher than the current core temperature.

5. The appliance heats with the set heating type.

The display indicates the current temperature, and below that the set core temperature.

You can change the set core temperature at any time.

Once the set core temperature is reached, a signal sounds. Cooking is automatically ended. Confirm with \(\checkmark\) and turn the function selector to 0.

**Estimated cooking time**

After preheating, if the appliance has a temperature setting above 212° F (100 °C), when the core temperature probe is inserted, the display shows an estimated cooking time approx. 5–20 minutes into the cooking time.

The estimated cooking time is continually updated. The longer the cooking process lasts, the more precise the estimated cooking time becomes. Do not open the appliance door; this distorts the estimated cooking time.

The estimated cooking time is displayed in normal operation and in the automatic program.

The current core temperature is shown in the display when you touch the \(\downarrow\) symbol.

The estimated cooking time display can be deactivated in the basic settings so that the current core temperature is shown instead. → “Basic settings” on page 36

**Notes**

- At the beginning of the cooking time, "<59° F" ("<15°C") is displayed for 3-4 minutes for the current core temperature.
- The measurable range is 59 to 210° F (15°C to 99°C). Outside the measurable range, <59°F or --°F ("<15°C" or "--°C") is displayed as the current core temperature.
- If you leave the food in the cooking compartment for some time after cooking, the core temperature will continue to rise somewhat due to the residual heat in the cooking compartment.
- If you set programs with the core temperature probe and the cooking timer at the same time, the appliance switches off whichever program reaches the entered value first.

---

**Core temperature guidelines**

Use chilled food only, not frozen food. The details given in the table are guidelines. Results depend on the quality and composition of the food.

For hygiene reasons, critical foodstuffs such as fish and game should reach a core temperature of 143 - 158° F (62 – 70 °C); for poultry and minced meat this should be as high as 176 - 185° F (80 – 85 °C).

Rotisserie spit

Using the rotisserie spit, you can prepare large roasts such as rolled roast and poultry particularly well. The meat becomes crispy and brown all round.

You can use the rotisserie spit in all modes of operation. You achieve the best results with the "Broil" or "Top heat" heating functions.

⚠️ CAUTION

Do not use the temperature probe in combination with the rotisserie spit.

Preparation

1. Insert both supports in the sockets on the grill tray. The drive is on the left.
2. Plug the right retaining clip onto the rotisserie spit and screw it in firmly.
3. Place the food you want to cook on the rotisserie spit’s center. Secure protruding parts (e.g. wings) to make sure they do not touch the grill heating element.
4. Plug the left retaining clip onto the rotisserie spit and screw it in firmly.
5. Place the rotisserie spit on the supports. Latch the square shaft into the drive section.
6. Insert the rotisserie spit in the lowest insertion level in the oven. The drive spindle must engage in the opening on the oven’s rear wall.

Switching on the rotisserie spit

1. Set the required temperature and heating function.
2. Touch the symbol. The rotisserie spit is switched on.
Switching off the rotisserie spit

1. Touch the symbol. The rotisserie spit’s drive stops.
2. Switch off the oven with the program selection.
3. Take out the grill tray with the rotisserie spit and place them on a stable, heat-resistant surface.

**WARNING**

Risk of burns!
Use a glove to remove them.

4. Screw on the handle at the side to remove the rotisserie spit.

Notes

- Use the rotisserie spit at oven temperatures up to 480°F (250°C) only.
- Do not clean the drive part of the rotisserie spit in a dishwasher.

---

Roasting function

Only with heating mode "Roaster function":
You will need the roaster, pull-out system and heating element (optional accessories).

In the searing stage, the oven heats at full power for approx. 3 minutes. This way, you can sear steaks, for example.

Touch the symbol. The searing stage starts up. You can also set the searing feature several times one after another.

To end the searing stage early, touch .

---

![Roasting function interface](image-url)
Childproof lock

The appliance has a panel lock to make sure children cannot operate it inadvertently.

Notes
- You must set the child lock in the factory setting to "Available" → "Basic settings" on page 36
- If there is a power cut while the child lock is activated, it may be deactivated when the power returns.

Activating the child lock

Requirement:
Program selector is set to 0.

Touch the symbol for at least 6 seconds.

The child lock is activated. The standby screen appears. The symbol appears at the top of the display.

Deactivating the child lock

Requirement:
Program selector is set to 0.

Touch the symbol for at least 6 seconds.

The child lock is deactivated. You can switch on the appliance in the usual manner.

Home Connect

This appliance can be networked and also controlled remotely using a mobile device. The Home Connect app offers extra functions that complement the networked appliance perfectly. If the appliance is not connected to your home network, it can be operated as usual via the display.

The availability of the Home Connect function depends on the availability of Home Connect services in your country. Home Connect services are not available in every country. You can find more information on this at www.home-connect.com.

Notes
- Ensure that you follow the safety instructions in this instruction manual and that you comply with these even when you are away from home and are operating the appliance via the Home Connect app. You must also follow the instructions in the Home Connect app.
- Operating the appliance directly from the appliance always takes priority. It is not possible to operate the appliance using the Home Connect app during this time.
- Refer to the Home Connect documents supplied for more information.

Setting Up

To configure settings via Home Connect, you will need to have installed the Home Connect app on a mobile device.

Your appliance will also need to be connected to your home network and to the Home Connect app. You can choose between the following connection types:
- Connection via LAN cable: The appliance is connected to the home network automatically following confirmation on the appliance.
- Connection via Wi-Fi: Establish the connection to your home network and then the connection to the Home Connect app.

Note: The app will guide you through the entire registration process. In case of doubt, follow the instructions in the app.

Installing the app

Install the Home Connect app on your mobile device (e.g. tablet PC or smartphone).

1. On your mobile device, go to the App Store (Apple devices) or the Google Play Store (Android devices).
2. Enter the search term "Home Connect".
3. Select the Home Connect app and install it on your mobile device.

4. Launch the app and set up Home Connect access.
   
   The app will guide you through the registration process.

Connecting the appliance to your home network (LAN)

The appliance must be connected to your home network using a LAN cable.

The network connection will be established automatically when the appliance is connected to the mains electricity supply for the first time and put into operation.

Connecting the appliance to your home network (Wi-Fi with WPS)

Requirements:

- Your router must have a WPS button. You will find information about this in the manual for your router.
- You need to be able to access your router.

1. In the basic settings, select "Home Connect".
2. Touch the \_ symbol.
3. Turn the rotary selector to "Wi-Fi".
4. Confirm by touching the ✅ symbol.

   A message about the WPS function will appear.

5. Touch the ✅ symbol to continue.
6. Turn the rotary selector to "Automatic (WPS)".
7. Touch the ✅ symbol to start the connection process.
8. Press the WPS button on the router within the next 2 minutes.

If the display shows "Network connection successful", the connection process is complete. Follow the instructions in the app.

Connecting the appliance to your home network (Wi-Fi without WPS)

1. In the basic settings, select "Home Connect".
2. Touch the \_ symbol.
3. Turn the rotary selector to "Wi-Fi".
4. Confirm by touching the ✅ symbol.

   A message about the WPS function will appear.

5. Touch the ✅ symbol to continue.
6. Turn the rotary selector to "Manual".
7. Touch the ✅ symbol to start the connection process.
   
   The appliance will set up its own "Home Connect" Wi-Fi network to which the tablet or smartphone must be connected.
8. Follow the instructions in the app.

If the display shows "Network connection successful", the connection process is complete. Follow the instructions in the app.

Connecting the appliance to the app

Connect your appliance to the app when setting up Home Connect or connect your appliance to an additional Home Connect account. The Home Connect app can be installed on any number of mobile devices, which can then be connected to the appliance.

Requirements:

- The appliance is connected to your home network.
- The Home Connect app has been installed on the mobile device.

1. To connect an additional account, select "Home Connect" in the basic settings.
2. Use the rotary selector to select "Connect to app".
3. Touch the \_ symbol and start the connection process with ✅.
4. Follow the instructions in the app.

If the display shows "Connection to app successful", the connection process is complete.

Remote Start

Remote start must be activated in order to start and operate your appliance via the Home Connect app. If remote start is deactivated, only the appliance operating modes can be displayed in the Home Connect app and appliance settings can be implemented.

The remote start is automatically deactivated if the appliance door is opened.

When you start the oven using a type of heating on the appliance itself, remote start is activated automatically. You can now make changes or start a new program from your mobile device.

Activating remote start

1. Set the function selector to 🔌.
2. Touch the ☰ symbol.

   ☰ appears next to the ✅ symbol.

Remote start is now activated. You can now use the mobile end device to start a type of heating via the app and transfer the required settings to the appliance.

To deactivate the remote start: Touch the ☰ symbol.
Home Connect settings

Home Connect can be adapted to your specific needs at any time. **Note:** You will find the Home Connect settings in the basic settings for your appliance. Which settings the display shows will depend on whether Home Connect has been set up and whether the appliance is connected to your home network.

You can view more information – such as the SSID (network name), although this depends on the connection type – by touching the arrow button. |

Remote Diagnostics

Customer Service can use Remote Diagnostics to access your appliance if you contact them, have your appliance connected to the Home Connect server and if Remote Diagnostics is available in the country in which you are using the appliance.

**Note:** For further information and details about the availability of Remote Diagnostics in your country, please visit the Service/Support section of your local website: www.home-connect.com
Information on Data Protection

When your appliance is connected to a WLAN network that is connected to the Internet for the first time, your appliance transmits the following categories of data to the Home Connect server (initial registration):

- Unique appliance identification (consisting of appliance codes as well as the MAC address of the installed Wi-Fi communication module).
- Security certificate of the Wi-Fi communication module (to ensure a secure data connection).
- The current software and hardware version of your appliance.
- Status of any previous resetting to factory settings.

This initial registration prepares the Home Connect functions for use and is only required when you want to use these Home Connect functions for the first time.

Note: Ensure that the Home Connect functions can be used only in conjunction with the Home Connect app. Information on data protection can be accessed in the Home Connect app.

Declaration of Conformity

Gaggenau Hausgeräte GmbH hereby declares that the appliance with Home Connect functionality meets the basic requirements and other relevant provisions of Directive 2014/53/EU.

A detailed RED Declaration of Conformity can be found online at www.gaggenau.com among the additional documents on the product page for your appliance.

Wi-Fi® Module

FCC/IC Statements

Model: COM2
FCC ID: 2AHES-COM2
IC: 21152-COM2

The Home Connect module is a communication device designed to provide communication between appliances and smart devices.

This module is integrated at the factory, under direct control of BSH Home Appliances Corporation, and is not user serviceable or upgradable. At least 7 7/8 inch (20 cm) separation distance should be maintained from device to user.

FCC COMPLIANCE STATEMENT

CAUTION

Changes or modifications not expressly approved could void your authority to use this equipment.

This device complies with Part 15 of the FCC Rules.
Operation to the following two conditions:
1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.

INDUSTRY CANADA STATEMENT

This device complies with Industry Canada license-exempt RSS standard(s).
Operation is subject to the following two conditions:
1. This device may not cause interference, and
2. This device must accept any interference, including interference that may cause undesired operation of the device.

Operation in the band 5150-5250 MHz is only for indoor use to reduce the potential for harmful interference to co-channel mobile satellite systems.
Basic settings

In the general settings, you can adapt your appliance individually.

1. Set the program selector to \( S \).
2. Select "General setting" with the rotary selector.
3. Touch the \( \checkmark \) symbol.
4. Set the required general setting with the rotary selector.

5. Touch the \( \_ \) symbol.
6. Set the general setting with the rotary selector.
7. Save with \( \checkmark \) or cancel with \( \times \) and quit the current general setting.
8. Turn the program selector to 0 to quit the general setting menu.

Changes are saved.

Cleaning and maintenance

If taken care of and cleaned conscientiously, your appliance will stay beautiful and intact for a long time. Here we explain how to take care of and clean your appliance correctly.

⚠️ WARNING
Risk of electrical shock!
Moisture entering the appliance can cause an electrical shock. Don't use a high-pressure cleaner or steam cleaner.

⚠️ WARNING
Risk of burns!
- To avoid risk of injury, never touch the inside surfaces of the oven interior or heating elements. These surfaces are extremely hot after use. Always allow the appliance to cool down before touching or cleaning the interior.
- Always turn off the interior light before cleaning the oven to allow the bulbs to cool down. The bulbs can become very hot when switched on. Keep the light off while cleaning the oven.
- Keep children away.

⚠️ WARNING
Risk of injury!
Scatched glass in the appliance door can burst. Do not use any glass scrapers or strong or abrasive cleaning agents.

⚠️ WARNING
Do not clean the appliance while it is still hot. Some cleaners produce noxious fumes when applied to a hot surface. Wet clothes and sponges can cause burns from steam.

Cleaning agents

Pay attention to the information in the table to ensure that the various surfaces are not damaged by incorrect cleaning agents.

Do not use any
- sharp or abrasive cleaning agents
- metal or glass scrapers to clean the glass on the appliance door.
- metal or glass scrapers to clean the door seal.
- hard abrasive pads or cleaning sponges.

Thoroughly rinse out new sponge cloths before use.

Cleaning and maintenance

Microfiber cloth
The honeycomb microfiber cloth is particularly suitable for cleaning sensitive surfaces such as glass, glass ceramic, stainless steel or aluminum (product no. 00460770, also available from our online shop). It removes liquid and greasy deposits in one go.

Removing the plug-in grid
The plug-in grids can be removed for cleaning.

Removing the plug-in grids
1. Put a dish towel in the cooking compartment to protect the enamel from scratches.
2. Loosen the knurled screws (Figure A).
3. Remove the plug-in grids (Figure B).

Hooking in the plug-in grids
1. Attach the plug-in grids all around: longer side toward the top. The right and left grids are identical.
2. Tighten the knurled screws.

### Cleaning agents

<table>
<thead>
<tr>
<th>Area</th>

<td>Hot soapy water: Soak and clean with a dish cloth or brush.</td>
</tr>
<tr>
<td>Plug-in grids</td>
<td>Dishwasher, see section → &quot;Removing the plug-in grid&quot; on page 40</td>
</tr>
<tr>
<td>Rotary spit (not available with all oven models)</td>
<td>Hot soapy water: Clean with a dish cloth or brush. Do not soak or clean the rotary spit drive in the dishwasher.</td>
</tr>
<tr>
<td>Telescopic shelf (Optional accessory)</td>
<td>Hot soapy water: Clean with a dish cloth or brush. Do not soak or clean in the dishwasher.</td>
</tr>
<tr>
<td>Baking stone (Optional accessory)</td>
<td>Clean burnt-on residues with a brush. Never clean the baking stone when it is wet.</td>
</tr>
<tr>
<td>Roasting dish (Optional accessory)</td>
<td>Hot soapy water: Soak and clean with a dish cloth or brush. Do not clean the roasting dish in the dishwasher.</td>
</tr>
</tbody>
</table>

You can clean the plug-in grids in the dishwasher.
Pyrolysis (self-cleaning)

During self-clean (pyrolysis), the oven heats up to 905°F (485°C). Thus, remainders from roasting, grilling or baking are burnt up and all you have to do is wipe the ash out of the interior.

Self-clean (pyrolysis) takes three hours. You can move the self-clean switch-off time (for example, if you would like it to run at night).

**WARNING**

During the elimination of soil during self-cleaning, small amounts of Carbon Monoxide can be created and the fiberglass insulation could give off very small amounts of formaldehyde during the first several cleaning cycles. To minimize exposure to these substances, provide good ventilation with an open window, or use a ventilation fan or hood.

Wipe out excessive spillage before self-cleaning the oven.

**WARNING**

Risk of fire!

The appliance becomes very hot during pyrolytic self-cleaning. Never hang flammable items such as dishcloths on the door handle. Keep the front of the appliance clear. Keep children away.

**WARNING**

Severe health risk!

The appliance becomes very hot during pyrolytic self-cleaning. The non-stick coatings on trays and forms are destroyed and toxic gases are produced. Never leave trays and forms with non-stick coatings in the oven during pyrolytic self-cleaning. Only leave enameled accessories in oven during self-clean cycle.

**WARNING**

Risk of burns!

The oven interior becomes very hot during pyrolytic cleaning. Never open the appliance door or the latching hook by hand. Allow the appliance to cool down. Keep children away.

Starting self-clean (pyrolysis)

1. Set the program selector to S.
2. The symbol is displayed. Confirm with .
3. The turn-off time for when the self-clean (pyrolysis) will be completed is displayed. If preferred, the turn-off time can be changed with the rotary selector. Confirm with .
4. Remove all accessories and coarse soiling from the oven interior. Confirm with .
5. Start with I. The cleaning time counts down on the screen. If the turn-off time was changed, the time until the self-clean (pyrolysis) starts counts down on the screen. The oven light remains off.

After 3 hours, a signal sounds. A message will appear on the screen. Once the appliance is cool, wipe out the remaining ash from the oven with a damp cloth.

**Note:** The oven door is locked for your safety. After cooling down, the door is unlocked as soon as the temperature has dropped below 390 °F (200 °C).

Depending on the type of soiling, white deposits may remain on the enamel surfaces. These deposits are residue from the food and are harmless. They do not affect how the appliance works. If required, you can remove these residues using lemon juice and a soft cloth.

---

**Cleaning the Accessories with the Pyrolytic Self-cleaning Feature**

Gaggenau baking trays and broiler pans are coated with pyrolysis-resistant enamel. For optimal results when cleaning the oven, we recommend removing all accessories from the oven before initiating the pyrolytic self-cleaning feature. This is the only way to achieve even heat distribution.

If you wish to remove burnt-on residue from your baking tray or broiler pan with the pyrolytic self-cleaning cycle, please observe the following instructions:

**Notes**

- Remove the worst soiling, meat juices, and food residues before initiating the pyrolytic self-cleaning cycle. Food residues, grease, and meat juices may catch fire during the pyrolytic self-cleaning cycle.
- Slide only one baking tray or broiler pan onto the lowest rack in the oven.
- Push the baking tray or broiler pan in as far as it will go.
- Wire rack, rotisserie spit, cast iron roaster, baking stone, core temperature sensor, or other accessories must not be cleaned in the pyrolytic self-cleaning cycle.
- Broiler pans with stainless steel bushings can discolor during the pyrolytic self-cleaning cycle. This does not affect its usability.
Troubleshooting

You can often easily eliminate problems that may occur on your own. Before calling Customer Service, take into account the following information.

**WARNING**

Risk of electric shock!

Improper repairs are dangerous. Only an authorized servicer may perform repairs and may replace damaged plug and connections. Remove the power plug or turn off the circuit breaker or fuse in the fuse box if the appliance is damaged or not working. Call Customer Service.

<table>
<thead>
<tr>
<th>Disruption</th>

<td></td>
</tr>
</tbody>
</table>

**Power cut**

Your appliance can bridge a power cut of a few seconds. Operation continues.

If the power cut was for a longer period and the appliance was in operation, a message appears in the display. Operation is interrupted.

Set the function selector to 0, then the appliance can be operated again as usual.

**Demo mode**

The demo mode is activated if the 🔄 symbol appears in the display. The appliance does not heat up.

Briefly disconnect the appliance from the mains (switch off the domestic fuse or the circuit-breaker in the fuse box). Then deactivate the demo mode within 3 minutes in the factory setting. → "Basic settings" on page 36

**Replacing the oven lamp**

You can replace the oven lamps. You can obtain replacement lamps after-sales service or from trade dealers. Use the same type of halogen bulbs only.

- Top lamp: 60 W/230 V/G9
- Side lamp: 10 W/12 V/G4
WARNING
Risk of electric shock!
When you replace the oven interior lamp, the contacts of the lamp holder are live. Before replacing the lamp, remove the power plug or deactivate the circuit breaker or fuse in the fuse box.

WARNING
Risk of burns!
Lamps become very hot when switched on. There is still a risk of burning your skin for some time after they have been switched off. Allow lamps to cool down before replacing them.

Note: Always use a dry cloth to remove the halogen lamp from its packaging. This lengthens the lamp's useful life.

Replacing the top oven lamp
1. Undo the screw on the lamp cover. The lamp cover folds down.
2. Take out the halogen lamp. Insert the new halogen lamp.
3. Fold up and screw down the lamp cover.
4. Switch on the fuse in the fuse box again.

Replacing the side oven lamp
1. Place a dishcloth in the oven to avoid damage.
2. Undo the knurled screws on the slide-in rack. Remove the slide-in rack.
3. Press the top retaining spring to the side. Remove the glass cover.
4. Take out the halogen lamp. Insert the new halogen lamp.
5. Insert the glass cover at the bottom into the retaining spring and latch it at the top. The beveled side of the glass cover must point toward the oven.
6. Remove the dishcloth from the oven.
7. Switch on the fuse in the fuse box again.

Replacing the glass cover
The glass cover in the oven must be replaced if it is damaged. You can obtain covers from after-sales service. Always specify the E number and the FD number of your appliance.

Customer service

If your appliance needs repairs, our customer service is there for you. We work hard to help solve problems quickly and without unnecessary service calls, getting your appliance back up and running correctly in the least amount of time possible.

When you call, please indicate the product number (E-Nr.) and serial number (FD-Nr.) so that we can support you in a qualified manner. You will find the type plate with these numbers on the bottom of the appliance. To avoid having to search for a long time when you need it, you can enter your appliance data and the customer support telephone number here.

E-Nr.  
FD-Nr.  

Customer Service  

Please read the use and care instructions provided with your appliance. Failure to do so may result in an error in using the appliance. This could result in a service call that instead of fixing a mechanical issue is only needed for customer education. Such calls are not covered by the appliance warranty.

To book a service visit and product advice

USA  877 442 4436  toll-free

CANADA  877 442 4436  toll-free

Please find the contact data of all countries in the enclosed customer service list.
Tables and tips

Notes

- Always preheat the appliance. This will produce the best cooking results. The cooking times specified refer to a preheated appliance.
- The values specified are intended as a guide. The actual cooking times depend on the quality and temperature of the food before cooking and the weight and thickness of the food to be cooked.
- The tables list temperature and/or time ranges. Try the lowest value to start. You can always choose a longer time next time if need be.

A lower temperature results in more even browning. If necessary, set a higher temperature.
- The specifications refer to average quantities for four people. If you would like to prepare more, you should calculate a longer cooking time.
- Use the cookware specified. If you use other cookware, cooking times may be longer or shorter.
- You may use any heat-resistant cookware. Place the cookware in the center of the wire rack. For large roasts, you can also use the grill or glass tray.
- Do not place too many items close together on the wire racks or baking trays. This guarantees optimal heat circulation.
- Open the door of the preheated oven for a short time only when placing food inside the cooking compartment.
- The details for the level refer to the slide-in level from below for appliances with 4 slide-in levels. The values in brackets refer to appliances with 5 slide-in levels.
- When removing glass cookware from the oven, set it down on a dry hot pad, never on a cold or wet surface. Otherwise, the glass may crack.
- Some operating modes are not available with all oven models or only with special accessories.

**Eco hot air:**
Energy-saving hot air mode for cakes, meats, casseroles, and gratins. Residual heat is optimally used. Convenience functions remain switched off (e.g. the interior lighting). The cooking compartment temperature can only be displayed while the appliance is heating up. Do not preheat the oven.

Make sure that the cooking compartment is cold and that there is nothing already in there when you place the food inside. Then start the specified cooking time. Always keep the appliance door closed when cooking. This prevents heat loss.

**Full surface grill and full surface grill + circulated air:**
In these operating modes, there may be a temperature difference between the temperature you have set and the actual temperature inside the oven. This is because grilling and browning are fast cooking processes that require high temperatures. Consequently, for browning and roasting, a higher temperature than is actually needed on the surface of the food is selected.
Vegetables

- Vegetables from the oven are a good alternative to vegetables from the pan. The flavors are concentrated and the roasting aromas make them very aromatic. Furthermore, very little fat is required for preparation.
- Wash the vegetables and mix them in a bowl with a little oil. Place in a heat-resistant pan or distribute evenly in the glass/grill tray.
- During cooking, stir at least once. After cooking, adjust the spices and flavor to taste with fresh herbs.
- Vegetables are suitable as warm or cold appetizers or vegetarian main dishes, or also as side dishes to be served with fish and meat.
- For small portions (for 2-3 people), use an ovenproof dish and place it on the wire rack. Otherwise the food will burn or dry out in the glass/wire tray.
- Always follow the manufacturer's instructions for pre-cooked and frozen products.

* Turn the food halfway through the cooking time.
The best side dishes from the oven are based on potatoes, for example potatoes au gratin. However, other outstanding side dishes can also be prepared in the oven, which normally are prepared in the pan (e.g. potato pancakes or fried potatoes). The advantages of this type of preparation: you can prepare larger quantities at once, the cooking smells are distributed less in the room, and you can prepare the dishes with less fat.

Another versatile side dish from the oven is cheese. Cheese is an especially good addition to vegetarian dishes, or you can prepare the cheese as an appetizer or finger food.

Dishes that are suited for preparation in the oven are especially dishes that are gratinated, such as casseroles and gratins. Suitable also are dishes with a dough base, e.g. pizza or tarte flambée, and egg dishes such as tortillas.

For small portions (for 2-3 people), use an ovenproof dish and place it on the wire rack. Otherwise the food will burn or dry out in the glass/wire tray.

Always follow the manufacturer’s instructions for pre-cooked and frozen products.

* Turn the food halfway through the cooking time.
### Cheese spätzle (Swabian noodle dish)

- **Accessories**: Ovenproof dish
- **Level**: 2 (3)
- **Temperature in °F (°C)**: 355/430 (180/220)
- **Type of heating**: ★
- **Cooking time in min.**: 30
- **Comments**: Gradually layer the freshly-cooked spätzle in the baking dish, sprinkling each layer with cheese. Finally, top with cheese and roasted onions and increase the temperature to 430°F (220 °C) for 5 min.

### Spring rolls, frozen

- **Accessories**: Baking tray + Grease-proof paper
- **Level**: 2 (3)
- **Temperature in °F (°C)**: 435 (225)
- **Type of heating**: ★
- **Cooking time in min.**: 18–20*

### Mini spring rolls, frozen

- **Accessories**: Baking tray + Grease-proof paper
- **Level**: 2 (3)
- **Temperature in °F (°C)**: 435 (225)
- **Type of heating**: ★
- **Cooking time in min.**: 10*

### Pizza, fresh

- **Accessories**: Baking tray
- **Level**: 2 (3)
- **Temperature in °F (°C)**: 445–480 (230–250)
- **Type of heating**: ***
- **Cooking time in min.**: 10–15
- **Comments**: Lightly oil the baking tray.

### Pizza, pre-baked

- **Accessories**: Baking tray + Grease-proof paper
- **Level**: 2 (3)
- **Temperature in °F (°C)**: 445 (230)
- **Type of heating**: ★
- **Cooking time in min.**: 6–8

### Pizza, frozen

- **Accessories**: Wire rack
- **Level**: 2 (3)
- **Temperature in °F (°C)**: 390 (200)
- **Type of heating**: ★
- **Cooking time in min.**: 11–13

### American pizza (deep pan), frozen

- **Accessories**: Baking tray
- **Level**: 2 (3)
- **Temperature in °F (°C)**: 390 (200)
- **Type of heating**: ***
- **Cooking time in min.**: 20–24
- **Comments**: Do not preheat.

### Tarte flambée, fresh

- **Accessories**: Baking tray
- **Level**: 2 (3)
- **Temperature in °F (°C)**: 480 (250)
- **Type of heating**: ***
- **Cooking time in min.**: 8–10
- **Comments**: Recipe tip: Traditional or with goat’s cheese, Parma ham, figs and spring onions.

### Tarte flambée, pre-baked

- **Accessories**: Baking tray + Grease-proof paper
- **Level**: 2 (3)
- **Temperature in °F (°C)**: 250
- **Type of heating**: ★
- **Cooking time in min.**: 7

### Tarte flambée, frozen

- **Accessories**: Wire rack
- **Level**: 2 (3)
- **Temperature in °F (°C)**: 390 (200)
- **Type of heating**: ★
- **Cooking time in min.**: 10–12

### Quiche

- **Accessories**: Tart tin or dish
- **Level**: 2 (3)
- **Temperature in °F (°C)**: 390 (200)
- **Type of heating**: ***
- **Cooking time in min.**: 20 + 20
- **Comments**: Pre-bake crust for 20 min., pour mixture into the crust, and bake another 20 min.

### Onion tart

- **Accessories**: Baking tray
- **Level**: 2 (3)
- **Temperature in °F (°C)**: 390 (200)
- **Type of heating**: ***
- **Cooking time in min.**: 30–40

* Turn the food halfway through the cooking time.
Fish

- Fish should (for hygienic reasons) have a core temperature of at least 144 - 158°F (62 - 70 °C) after cooking. This is also the ideal cooking point.
- Only salt the fish after cooking. Thus the natural aroma is retained and less water is removed from the fish.
- Oil the wire rack and baking tray a little bit, then the fish will not stick.
- For fillets with skin: if you place the fish skin-side up, the structure and aroma will be retained better.
- Cut wooden skewers short or soak in water overnight before skewering the ingredients so they do not burn.
- Always follow the manufacturer's instructions for pre-cooked and frozen products.

* Turn the food halfway through the cooking time.
Meat

- Use the core temperature sensor so that you can monitor the core temperature more easily. Information and optimum target temperatures can be found in the section entitled "Core temperature probe" on page 26.

- Leaving meat to rest: Let meat rest for a further 10 - 15 minutes after cooking. This gives the meat a chance to "relax". The circulation of the meat juice slows down and there is less loss of juice when cutting into the meat. Large pieces of meat, such as roasts, can rest in the oven. Smaller ones, e.g. steaks, should rest outside the oven wrapped in aluminum foil.

- For small portions (2 - 3 people), use a heat-resistant pan so that the food does not burn or dry out.

- Use the grill tray or the roasting dish for a large roast and for types of preparation that generate a lot of liquid for roasting.

- For best results, leave meat to marinate overnight and remove it before roasting or grilling, e.g. using the back of a knife or a spoon. Otherwise, the herbs and spices will burn.

- If the roast gets too dark and the crust is burned in places, reduce the temperature the next time and check the rack level.

- If the roast is cooked but the sauce is burned on, next time use a smaller roasting dish and add more liquid. If the sauce is too watery, next time use a larger roasting dish and add less liquid.

*** Cook meat at a low temperature, set the temperature higher for the last 15 - 20 min.
### Poultry

- For better results, use the core temperature sensor. Do not place it in the middle (hollow space), but rather between the belly and upper thigh. For notes and optimal target temperatures, see chapter "Core temperature probe" on page 26.

- Poultry will turn out particularly crispy and brown if you baste it towards the end of the roasting time with butter, salted water, drippings or orange juice.

- When cooking duck or goose, pierce the skin on the underside of the wings to allow the fat to run out.

- Use a roasting dish or another heat-resistant pan for dishes that generate a lot of liquid for roasting. The same applies if a lot of fat can run out of the food, e.g. with roast goose.

</tbody>
</table>

* Cook meat at a low temperature, set the temperature higher for the last 15 - 20 min.
** Turn food halfway through the cooking time.
Grilling and roasting

- Do not grill food with the oven door open.
- Use the grill tray with inlaid shelf for grilling (depending on the version, accessory or special accessory). Pour approximately 100 ml water into the grill tray; this will catch the meat juices so that the oven stays clean. If you pour in too much water, this may alter the cooking result because too much steam will be produced.
- The pieces of food to be grilled should be of roughly the same thickness (at least 2 to 3 cm). This will allow them to brown evenly and remain succulent and juicy. Never add salt to meat before grilling it. Place the pieces to be grilled directly on the wire rack.
- If you use wooden skewers, these can burn. In order to prevent this, cut the skewers as short as possible or soak them overnight in water before spearing the ingredients, or use metal skewers.
- For small quantities, use the energy-saving "Compact grill" heating function. With this heating function, only the center part of the grill is heated. Place the food to be grilled in the middle of the wire rack.

</table>

* Turn the food halfway through the cooking time.

** Brown to the level you require.
Baked goods

- We recommend dark pans of metal since these absorb the heat better. Place the pan in the middle of the wire rack.
- For sheet cakes without greaseproof paper, oil the pan slightly.
- Small baked items such as cream puffs, cookies or pastries can be baked on two levels, 1+3 or 2+4.
- If you bake on several levels it is normal that the trays are not done at the same time. Leave the lower trays bake a little longer or put them in the oven earlier the next time.
- Before cutting, let the baked goods cool on a rack.
- If the baked goods are too dark on the bottom: insert one level higher, select a lower temperature.
  - If the baked goods are too dark on the top: insert one level lower, select a lower temperature, and extend the baking time a bit.
  - If the cake is too dry, set the temperature a little higher. If the cake is not cooked on the inside, set the temperature a little lower.
  - Baking times cannot be shortened by selecting a higher temperature; it is better to select a somewhat lower temperature.
  - If the cake collapses: use less liquid or set the temperature 50°F (10 °C) lower. Do not open the oven door too soon.
- The cake rises only in the middle: grease the edges of the pan.

- If the cookies are hard to take off the sheet, insert the sheet in the hot oven again and remove the cookies while they are still warm.
- If the cake does not come out of the pan when you turn it over, use a knife to loosen the cake around the edges. Turn the cake pan upside down again and cover it several times with a cold, wet cloth. Next time, grease the pan well and sprinkle some bread crumbs into it.
- Always follow the manufacturer’s instructions for pre-cooked and frozen products.

Tables and tips

Dough proving (leaving to rise)

- Place the bowl with the dough on the wire rack. Select the "dough proofing" heating function.
- For large quantities, e.g. bread, set the temperature to 100 - 105°F (38 - 40°C). This way, the dough rises evenly from the middle to the edges.
- For small quantities of dough, for noodles or rolls, you can set the temperature to 105 - 115°F (40 - 45 °C).
- The suggested cooking time is only a guideline. Let the dough proof until its volume has doubled.
- If the dough does not rise, you have used too little yeast or not kneaded the dough enough.

Desserts

- Oven-cooked desserts are very easy to prepare – you just have to put it in the oven. This preparation method is well-suited for larger quantities, for example if you have guests.

- Oven-cooked desserts are generally eaten warm, and are particularly enjoyable during the cooler months.

</table>
Defrosting

- For this, use the "defrost" heating function.
- The defrost values specified are intended as a guide. The defrost time depends on the size, weight, and shape of the food to be defrosted: freeze your foods flat or separately. This shortens the defrost time.
- Slide the wire rack with the frozen food into the second shelf level (in the third shelf level if there are five shelf levels). Slide the grill tray underneath to catch any excess liquid.
- Remove the food from the packaging before defrosting.
- Only defrost the quantity that you need right away.
- Please consider: defrosted food will not last as long as frozen food and will spoil more quickly than fresh food. Prepare defrosted food immediately and cook it thoroughly.
- After half the defrost time has elapsed, turn the meat or fish. Separate defrosted food in pieces, e.g. berries or pieces of meat. Fish does not have to defrost all the way; it is sufficient if the surface is soft enough to take up the spices.
- The oven is not suited for defrosting whole chickens and roasts; this takes a long time. It is much faster to defrost such foods in the steam oven.

⚠️ WARNING

Health risk!

When defrosting food from animal sources, you must remove the liquid that escapes during defrosting. It must never come into contact with other food. Bacteria could be transferred.

Slide the glass/grill tray under the food. Pour away the excess liquid collected from the meat and poultry. Then clean the sink and rinse with plenty of water. Clean the glass/grill tray in hot soapy water or in the dishwasher.

After defrosting, operate the oven for 15 minutes using Hot air at 355°F (180°C).

</tbody>
</table>
Preserving

- If possible, cook food immediately after purchase or harvesting. Longer storage decreases the vitamin content and can cause spoilage.
- Only use fruit and vegetables in good condition.
- The oven is not suited for preserving meat.
- Check and clean the canning jars, rubber rings, clamps, and springs carefully.

- Place the canning jars in a heat-resistant container with water. Make sure that they do not touch. The water level must reach at least three quarters of the way up to the top of the contents of the jars.
- Open the cooking compartment door after the cooking time has elapsed. Do not remove the canning jars from the cooking compartment until they have cooled down completely.
- Store the preserves in a cool, dark and dry place, e.g. in a pantry. Once the jars have been opened, use the contents up quickly and store in the refrigerator.

### Disinfecting

- Before canning, the jars should be disinfected in the oven in order to prevent spoilage. Only this way is it possible to store canned goods for a longer time and outside the refrigerator.

### Drying

- Drying is a preservation method with which, through the feeding in of dry heat, up to 50% of the liquid in food is removed. At the same time, the flavor becomes more intense.
- The thicker the food is, the longer the drying process takes. Drying is the fastest and most energy-saving method if you want to cut food into slices.

</table>
You will need a baking stone and heating element – these are optional accessories.

Whether you are baking crispy pizza or fresh bread, with the baking stone, you will achieve results that are comparable to, or even exceed, those that you would get from a massive stone oven because you are able to precisely control the baking temperature.

Depending on the size, you can also place several pizzas, rolls or other baked goods on the baking stone at the same time.

You can bake several pizzas in succession. This may increase the baking time per pizza by approx. 1 - 3 minutes.

When baking bread, we recommend that you use the core temperature sensor. Wait 10 - 15 minutes after baking has begun before inserting the core temperature sensor into the thickest part of the bread. The sensor measures the internal temperature of the baked goods and switches the oven off when the set core temperature has been reached.

When dough is baked, it needs to be able to expand without the surface breaking apart. This can be achieved by pricking it several times with a fork or by making a cut with a knife.

The temperatures and times given in the cooking table are guideline values. Always follow the manufacturer's instructions for pre-cooked and frozen products.

### Baking stone

- You will need a baking stone and heating element – these are optional accessories.
- Whether you are baking crispy pizza or fresh bread, with the baking stone, you will achieve results that are comparable to, or even exceed, those that you would get from a massive stone oven because you are able to precisely control the baking temperature.
- Depending on the size, you can also place several pizzas, rolls or other baked goods on the baking stone at the same time.
- You can bake several pizzas in succession. This may increase the baking time per pizza by approx. 1 - 3 minutes.

---

* Pre-heat the appliance to the specified temperature. Turn the temperature down when placing the food in the oven.
## Roasting dish

- You will need a roaster, pull-out system and heating element – these are optional accessories.
- In the roasting dish, you can also braise large pieces of meat easily and cook large quantities.
- Food is easy to prepare and can be kept warm in the oven. Your kitchen will look clean and tidy, the cooktop will not be dirty, and there will be fewer cooking odors because the dish was cooked in the oven.
- The non-stick coating enables you to roast using very little fat.
  - Tip: Instead of adding the fat to the roasting dish, oil the meat. This ensures that the heat is transferred directly to the meat.
- Cooking liquids reduce down quickly. Make sure there is always sufficient cooking liquid. For a cooking time of 30 minutes, add approx. ½ l liquid.
- When roasting in a sauce, always ensure the sauce remains runny and add cooking liquid.
- In addition, follow the instructions in the instruction manual for the roasting dish.

* Pre-heat the appliance to the specified temperature. Turn the temperature down when placing the food in the oven.

** Brown the meat at high temperature, switch back to a lower temperature for further cooking.
Acrylamide in foodstuffs

Which foods are affected?

Acrylamide is mainly produced in grain and potato products that are heated to high temperatures, such as chips, fries, toast, rolls, bread, fine baked goods (cookies, gingerbread, Christmas spice cookies).

**Acrylamide in foodstuffs**

**Which foods are affected?**

Acrylamide is mainly produced in grain and potato products that are heated to high temperatures, such as chips, fries, toast, rolls, bread, fine baked goods (cookies, gingerbread, Christmas spice cookies).

**Tips for keeping acrylamide to a minimum when preparing food**

### General
Keep cooking times as short as possible. Cook food until it is golden brown, but not too dark. Large, thick pieces of food contain less acrylamide.

### Baking
With hot air at max. 355° F (180 °C).

### Cookies
Egg or egg yolk reduces the production of acrylamide. Spread out a single layer evenly on the baking tray.

### Oven
Cook at least 400 g at once on a baking tray so that the fries do not dry out.
