

Cut-out dimensions for Vario 200 series combinations.

The drawings below show the recess dimensions for typical Vario 200 series cooktop combinations. The installer can find out the suitable cut-out dimensions for the combinations most frequently used by referring to the previous pages and the sketches below and on the next page.

How to calculate? General Rules.

First calculate the overall dimension of the cooktop set up. Do this by adding each unit's overall width and add 3/16" for each connecting strip used. Once you have the final figure for the overall dimension, deduct the overlap of the cooktop set up at each end (starting and ending unit).

Cut-out dimension = Overall dimension. The overlap at each end (total overlap).

Between each unit (cooktops and ventilators) a connecting strip should be placed and added to the overall dimension of the cooktop set up.

The Vario 200 series does not have finishing strips.

When installing only one unit, the cut-out dimension is 10 9/16" for the 12" units, 22 1/8" for the VE260614 and VG264214CA.
