## Checklist for appliance combinations 400 series

This check list provides the most relevant parameters for the perfect combination and ordering of ovens, Combi-steam ovens, Combi-microwave ovens, fully-automatic espresso machine, vacuuming drawers, warming drawers and dishwashers.

### In general:

- ☐ When several products are listed (BS/BM and DV/WS), the first appliance is shown.
- ☐ Combi-steam ovens, Combimicrowave ovens or a fullyautomatic espresso machine in combination with a DV 461 vacuuming drawer or a WS 461 warming drawer (5½" in height) have the same total height as a 24" wide oven and they share the same cut-out. In a combination with the WS 463 warming drawer an intermediate shelf is required.

### Vertical combinations

When planning and ordering please note that:

- ☐ The door hinges of the appliances must be on the same side.
- ☐ The door hinge (right-/left-hinged) is not reversible.
- identical.
- ☐ The control modules of 30" wide appliances should meet each other in the middle of the combination.
- ☐ No additional product should be installed above the BS.
- the top can be installed above a dishwasher. The cutout for products that are installed above it must be 22  $1/_{16}$ " wide. The dishwasher is 24" wide. A stainlesssteel-backed full glass door can be obtained as an optional accessory.

## Horizontal combinations

When planning and ordering please note that:

- ☐ The door hinges need to be placed on the outside in order to use the fully available door opening angle.
- ☐ The door hinge (right-/left-hinged) is not reversible.
- ☐ A minimum clearance of %" between the two doors must be observed.
- BO Ovens
- BS Combi-steam ovens
- BM Combi-microwave oven
- CM Fully-automatic espresso machine
- DV Vacuuming drawers
- WS Warming drawers
- DF Dishwashers

## Planning notes for the recommended installation of 400 series ovens

Applies to BO/BX/BS/BM/CM/DV/

#### General notes

Necessary air openings

on the door edges

# Installation behind kitchen cabinet doors

Appropriate measures must be taken to prevent these types of doors from closing when the appliance is heating or while it is cooling down (fan operation). Please check your local regulations.

### Installation side-by-side

When appliances are installed side by side, the clearance between the appliances must be at least %" (corresponds to the standard outside measurement of the cabinet opening of 23 %" or 30"). For best possible door opening, the door hinges need to be placed outside in order to use the full available door opening angle. (see picture to the right).

Please note: When Sabbath mode is engaged, the automatic door release is deactivated.

Gaggenau 400 series ovens are supplied with fresh air for cooling at the top edge and side edges of the door. Hot air is blown out at the door bottom edge. Combi-steam ovens and Combi-microwave ovens have the air inlet at the side edges of the door and the hot air and steam outlets at the top edge of the door.

In order to prevent appliances from overheating and to ensure that they cool down as required after operation, appropriate minimum cross sections of free space must be maintained from kitchen cabinet edges.

The measurements given in the drawing apply to all appliances. The following must also be observed:

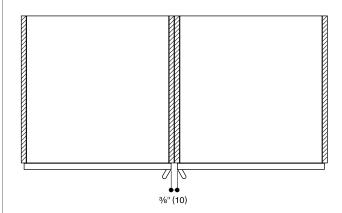

# The area above the appliances BS:

No other electrical appliances should be installed above the BS Combisteam oven. It is recommended that a horizontal handle is not fitted on cabinet above the BS. Where an edge of a kitchen cabinet protrudes more than 13/16" in front of the edge of the cabinet opening, the edge of the kitchen cabinet panel must be steam resistant as is the case above a dishwasher. Steam may possibly penetrate into the shelf compartment.

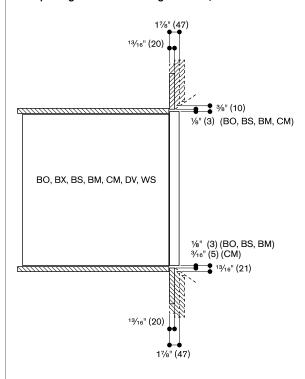

# The area below the appliances DV/WS:

It must be ensured that there is sufficient access to the lower edge of the vacuuming drawer and warming drawer, if the thickness of the kitchen cabinet door is greater than 1%16" (20 mm) in front of the cabinet opening.

### Installation side-by-side

## Air openings on the door edges above/below

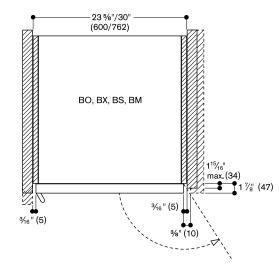

### At the sides

In situations where kitchen cabinet doors are thicker, or where sidewalls protrude up to 1 %/s" from the front of the edge of the cabinet opening, the minimum distance on the hinge side is sufficient for the air supply and a door opening angle of 120°. Above that, a distance of %" or even more is required.

The handle side may, if required, be covered by a side panel provided that the minimum distance is maintained.

## Air openings on the door edges

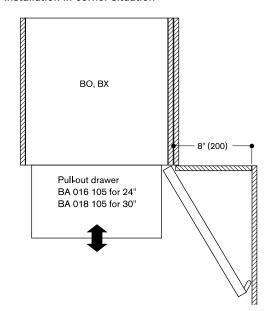

### Installation in corners

### Door clearance at the sides

When the pull-out drawer is used, a larger door opening angle of 7 %" is required. For all other situations,  $3\,^{15}\!/_{16}$ " is recommended. Where there are smaller side clearances down to a minimum of  $1\,^{15}\!/_{16}$ ", restrictions in handling hot baking trays should be expected and the user-friendliness of the side-opening door can not be taken for granted.

### Installation in corner situation

### Installation next to cooling appliances

When installing a 400 series Vario cooling appliancenext to a 400 series BO/BM/BS/CM appliance, a minimum lateral distance of 1 \$\s^{1}\text{e}" (30 mm) is required.

# Planning notes for flush installation of 400 series ovens

Applies to BO/BX/BS/BM/CM/DV/

### Flush installation

## Important notes about flush installation

When appliances are installed flush, the ovens must have a minimum of %" (10 mm) reveal in order for proper ventilation to occur. When installed flush, oven doors will be limited to 90 degree opening and not 180 degrees if installed conventionally.

Please note: When Sabbath mode is engaged, the automatic door release is deactivated. Sabbath operation is not possible in this installation.

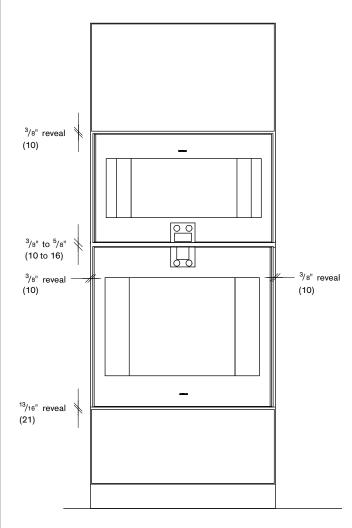

Please note: In order to open the vacuuming and warming drawer please

Please note: In order to open the vacuuming and warming drawer please ensure there is sufficient space in between the drawer and the cabinetry underneath.

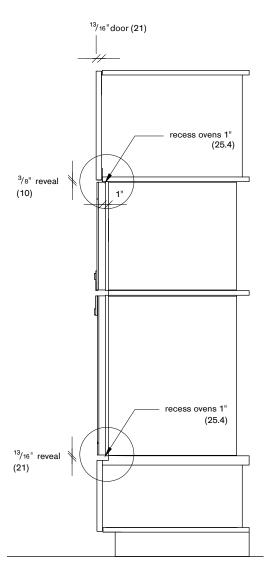

### Proper Ventilation

Gaggenau 400 series ovens are supplied with fresh air for cooling at the top edge and side edges of the door. Hot air is blown out at the door bottom edge. Combi-steam ovens have the air inlet at the side edges of the door and the hot air and steam outlets at the top edge of the door. In order to prevent appliances from overheating and to ensure that they cool down as required after operation, appropriate minimum cross sections of free space must be maintained from kitchen cabinet edges.

## BM 484 over BO 480

Elevation

Section

Installation next to cooling appliances

When installing a 400 series Vario cooling appliance next to a 400 series BO/BM/BS/CM appliance, a minimum lateral distance of 1 %16" (30 mm) is required.
